LIQUID BASKETBALL

FBBL Manager - Current How-to-Play Guide

BUILD. RECRUIT. COMPETE. GROW.

Build a long-term FBBL dynasty by balancing the weekly 30-hour plan, academics, recruiting, roster/rotation decisions, budgets, sponsorships, the offseason Transfer Station, coach decisions, community service, player/coach events, online competition, and postseason success.

LATEST FLOW

Schedule -> questions -> scouting -> 30-Hour Plan -> academics -> roster/rotation -> recruiting/program management -> pregame plan -> live simulation -> box score/coaching review -> save -> advance.

1. Choose How to Play

Mode	Best for	Account / save behavior
Solo Dynasty	Long-term single-player program	Normal sign-in supports 3 independent cloud save slots. Offline play is also available.
Classroom Mode	Teacher curriculum inside the normal management game	Student name + Class Code + optional Class Key; no student email/password. Classroom v2 supports 3-10 questions and written work.
Online League Dynasty	Shared FBBL competition	Normal signed-in account required; shared league data is separate from personal Dynasty save slots.

SAVE ISOLATION

A signed-in account can keep up to three personal Dynasty saves. Online League memberships are separate. Starting or joining an Online League should not erase or replace a solo Dynasty.

2. The Weekly Coaching Loop

Step	What you do	Why it matters
1. Schedule	Review opponent, site, Region/non-Region context, standings, and travel.	Sets scouting, budget, and season context.
2. Questions	Standard Dynasty: up to 3 trivia questions, +2 points/+2 interactions each. Classroom v2 may assign 3-10.	Builds the interaction bank.
3. Scout + 30-Hour Plan	Study matchups and allocate exactly 30 team-preparation hours.	Preparation, readiness, growth, and academics.
4. Academics	Check GPA, eligibility, degree progress; use Study Hall when needed.	Ineligible players cannot help on game day.
5. Manage	Recruit, develop, manage budget, sponsorships, community/player events.	Build the current and future program.
6. Roster / Rotation	Set the best eligible rotation and roles.	Lineup quality and matchup fit affect strength.
7. Pregame Plan	Choose offensive and defensive approaches before tip-off.	Sets your initial game plan before live decisions.
8. Simulate / Coach	Follow the live log and answer situational decisions.	Choices react to score, clock, matchup, and game state.
9. Review + Save	The game moves to the box score; review decisions/stats, save, then advance.	Closes the week cleanly and protects your Dynasty state.

3. Interaction Economy and Classroom v2

Standard Dynasty: up to 3 questions each game week. Each correct answer earns +2 Trivia Points and +2 management interactions. The normal regular/postseason spending cap is 6 interactions; unused interactions stay banked.

Classroom v2: the teacher chooses 3-10 questions. The full-credit weekly pool stays 6 Trivia Points + 6 interactions, so the value of each question scales automatically. Multiple Choice can grade instantly; Short Answer and Essay may use automatic, teacher, or completion grading depending on the assignment.

BANKING MATTERS

You do not have to spend interactions immediately. Saving them creates flexibility for recruiting, development, retention, and the offseason.

4. Scouting, 30-Hour Plan, and Academics

- The weekly Basketball plan must total exactly 30 hours before you play/advance.
- Use scouting to identify individual favorable, balanced, and challenging matchups; targeted preparation can create a modest one-game bonus without making scouting a guaranteed formula.
- Allocate time among offense, defense, shooting, film, strength, recovery, team building, and Study Hall as the game presents them.
- Study Hall is capped at 10 hours and helps protect academic eligibility.
- Players have persistent majors, GPA, eligibility, degree credits, and graduation progress. Graduation performance can affect coach career outcomes.

GPA	Track	Meaning
3.50-4.00	Fast Track	Can finish early; a player with athletic eligibility remaining may continue as GR.
3.00-3.49	Advanced	Faster than normal academic progress.
2.50-2.99	Normal	Typical progress.
2.00-2.49	Scraping By	Eligible but fragile.
Below 2.00	Flunking	Academically ineligible until GPA improves.

5. Roster, Recruiting, GIS, and Budget

- Set the rotation carefully because a smaller active basketball roster makes each role/minute decision matter.
- Recruiting uses interactions and operating money. Distance in the fictional Basketball Universe affects recruiting expense.
- Committed recruits join in the appropriate future season; annual class/roster limits still apply.
- GIS can show schools, fictional states/regions, hometowns, recruits, committed recruits, players, terrain/geology, oceans, rivers, lakes, highways/local roads, and route/mileage context.
- Budget categories include Recruiting, Meals, Hotel, and Fuel. The travel safeguard protects a minimum reserve so the team can finish scheduled travel.

FICTIONAL MAP

GIS routes and mileage are game-universe management estimates, not real-world navigation.

6. Sponsorships, Transfer Station, and Program Events

System	Controlled	Auto - Delegated	Old School - Inactive
Sponsorships	You evaluate fictional opportunities.	Staff handles active sponsorship management.	Sponsorships removed from the management experience.
Transfer Station	You handle retention and offseason transfer recruiting.	Staff handles eligible offseason movement with the same economy.	Transfer Station removed.

If both Sponsorships and the Transfer Station are inactive, the game identifies the setup as Old School Mode. The Transfer Station is closed during the regular season/postseason and opens in its designated offseason window.

Community-service and player/coach events create morale, reputation, trust, time, energy, and career tradeoffs. Newer locker-room issues are designed to be more grounded while staying PG; the game does not expose predicted consequences before you choose an action.

7. Pregame, Live Simulation, and Postgame Review

- Before tip-off, the Pregame Game Plan lets you choose offensive and defensive approaches or back out without starting the simulation.
- The live simulation uses two halves, possessions, fouls, rebounds, turnovers, made/missed shots, runs/momentum, late-game pressure, and overtime.
- Situational coaching decisions appear at important moments. A visible 20-second timer is used for live decisions; if time expires, the game uses a neutral/default available choice and continues.
- The game does not advertise the eventual number of coaching decisions before the game. Decision outcomes are shown after choices instead of exposing predicted effects beforehand.
- At the final buzzer, the game moves directly into the box score. Postgame Coaching Review reports how many in-game decisions occurred and preserves the recorded choices/outcomes for review.
- Final score, game log, and box-score state are intended to reconcile to the same simulation result.

8. Rankings, Schedule, Postseason, and Season Rollover

- The standard FBBL Rankings screen is the FBBL Top 10. Rankings use current results and context rather than raw program rating alone.
- Region opponents are scheduled as required; Region opponents may repeat if needed to fill the Basketball slate, while non-Region opponents should not repeat.
- The shared/current FBBL season uses an 18-week regular season. After Week 18, the 26-program single-elimination FBBL Tournament uses five rounds; seeds 1-6 receive first-round byes.
- At season end, history is archived before the next season begins. Seniors/departing players leave as appropriate, returning-player current-season stat buckets reset, and historical records remain preserved.
- Use Season Stats for the current season and Historical for completed seasons, championships, awards, and records.

RESET CHECK

A returning player should begin the new season with zero current-season statistics. Old totals belong in history, not the new Season Stats screen.

9. Saving, Tutorials, and Quick Troubleshooting

If this happens	Try this first
Save manager is open while you are in a Dynasty	Use the return/close control to go back to the active game without logging out.
A save seems wrong after writing	Keep the game open and save again only after confirming the active slot/team/season/week; the current save path verifies cloud read-back before success.
Tutorial blocks the screen	Use the quick X or Escape when available.
Pregame/box score blocks the screen	Use the X/Back control or Escape.
GIS layer appears empty	Enable the layer and confirm the current roster/recruit pool actually has data for it.
Dropdown/card is clipped	Hard refresh and confirm the latest standard HTML/CSS is deployed.
