FBFL Manager - Current How-to-Play Guide

BUILD. RECRUIT. PREPARE. COMPETE.

Build a long-term FBFL program by managing a 12-game season, weekly questions, scouting, individual/position-group training, academics, recruiting, depth chart decisions, budget, sponsorships, the offseason Transfer Station, community/player events, live coaching decisions, postseason play, and career history.

LATEST FLOW

Schedule -> questions -> scouting -> training/academics -> roster/depth chart -> recruiting/program management -> pregame plan -> live simulation -> box score/coaching review -> save -> advance.

1. Choose How to Play

Mode	Best for	Account / save behavior
Solo Dynasty	Long-term single-player program	Normal sign-in supports 3 independent cloud save slots. Offline play is also available.
Classroom Mode	Teacher curriculum inside the normal management game	Student name + Class Code + optional Class Key; no student email/password. Classroom v2 supports 3-10 questions and written work.
Online League Dynasty	Shared FBFL competition	Normal signed-in account required; shared league data is separate from personal Dynasty save slots.

SAVE ISOLATION

Standard FBFL saves use their own namespace. Up to three personal Dynasty slots stay separate from Online League memberships and from the separate NJCAA product branch.

2. Weekly Coaching Loop

Step	What you do	Why it matters
1. Schedule	Review opponent, site, Region context, record, travel and bye/week status.	Sets scouting, travel and season context.
2. Questions	Standard Dynasty: up to 3 questions, +10 points/+10 interactions each. Classroom v2 may assign 3-10.	Builds the interaction bank.
3. Scouting	Review opponent tendencies and recommended position groups.	Identifies preparation priorities.
4. Training + Academics	Use individual or position-group work and check GPA/eligibility.	Development, readiness and eligibility.
5. Manage Program	Recruit, budget, sponsorships, community/player events, Transfer Station when open.	Builds current and future program strength.
6. Depth Chart / Schemes	Set eligible starters/roles and offensive/defensive approach.	Defines usable personnel and identity.
7. Pregame Plan	Confirm offensive and defensive approaches before kickoff.	Sets the initial plan before live decisions.
8. Simulate / Coach	Follow four-quarter football and answer situational decisions.	Choices react to score, clock, down/distance and field position.
9. Review + Save	Open box score/coaching review, verify stats, save and advance.	Closes the week and protects Dynasty state.

3. Questions, Interactions, and Classroom v2

Standard Dynasty: up to 3 weekly questions. Each correct answer earns +10 Trivia Points and +10 management interactions. The normal regular/postseason spending cap is 30 interactions; unused interactions remain banked.

Classroom v2: teachers choose 3-10 questions. The full-credit weekly pool stays 30 points/interactions, so per-question value scales automatically. Multiple Choice can grade immediately; Short Answer and Essay can use automatic, teacher-review, or completion grading where configured.

4. Scouting, Training, Schemes, and Academics

- Train individual players or whole position groups: QB, RB/FB, WR/TE, OL, DL, LB, DB, and Specialists.
- Scouting can recommend preparation for protection/run blocking, rushing/ball security, quarterback execution, receiver separation, pass rush/run fits, coverage, or special teams.
- Following a recommended group can create a modest one-game preparation benefit; ignoring it does not create an artificial punishment.
- Offensive concepts include Wishbone, Spread Option, I Formation, Split Backs, Maryland I, and Run and Shoot.
- Defensive choices include 4-3, 3-4, 46/Bear, goal-line, blitz packages, and Prevent.
- Players keep majors, GPA, eligibility and degree progress. Graduation performance affects coach-career outcomes.

GPA	Academic track	Meaning
3.50-4.00	Fast Track	Can finish early; remaining athletic eligibility may allow GR status.
3.00-3.49	Advanced	Faster than normal degree progress.
2.50-2.99	Normal	Typical progress.
2.00-2.49	Scraping By	Eligible but academically fragile.
Below 2.00	Flunking	Academically ineligible until GPA improves.

5. Recruiting, GIS, Budget, and Program Systems

- Recruiting uses management interactions and operating money; prospect distance in the fictional Football Universe affects recruiting expense.
- GIS can show schools, fictional states/regions, hometowns, recruits, committed recruits, players, terrain/geology, oceans, rivers, lakes, highways/local roads, and route/mileage context.
- Budget categories include Recruiting, Meals, Hotel, and Fuel. A travel safeguard protects enough reserve to complete scheduled travel.
- Sponsorships and the Transfer Station each support Controlled, Auto - Delegated, or Old School - Inactive. If both are inactive, the game identifies Old School Mode.
- The Transfer Station is closed during regular season/postseason and opens during the designated offseason window.
- Community service and player/coach events create morale, trust, energy, reputation, administrative and career tradeoffs. Predicted consequences are not shown before a choice.

6. Pregame, Live Simulation, and Postgame

- Pregame Game Plan lets you choose offensive and defensive approaches before the simulation starts or back out without launching the game.
- The live game uses four quarters with possession, down-and-distance, field position, penalties, sacks, turnovers, punts, field goals, touchdowns, clock pressure and overtime.
- The Coach Game Log keeps displayed down, distance and field position synchronized from snap to snap.

- Important coaching decisions use the current score/situation. A visible 20-second timer is part of the standard decision system.
- The game does not announce the eventual number of decision prompts before kickoff and does not expose predicted consequences before the choice.
- At game end, the box score opens directly and Postgame Coaching Review preserves the decision count/recorded choices and outcomes.

7. Season, Rankings, Postseason, History, and Saves

- The standard solo FBFL schedule plays 12 regular-season games across 13 calendar weeks, including one bye. Every Region opponent is played once and regular-season opponents do not repeat.
- Current-season statistical buckets reset when a new season begins; completed-season history remains archived.
- Historical records preserve completed seasons, championships, awards and football statistical records.
- Coach career can incorporate wins/losses, postseason performance, reputation, graduation results, budget/program outcomes and other management consequences.
- The Save Manager supports up to three signed-in personal Dynasty slots. Opening the manager saves the active Dynasty before switching; returning from it should not force logout.

STANDARD FBFL ONLY

These instructions describe the fictional standard FBFL Manager. They do not apply to the separate NJCAA Football Program Manager build.

8. Troubleshooting

Problem	First check
Wrong save appears	Confirm you are in standard FBFL and the correct save slot/account.
Down/distance looks wrong	Hard refresh and confirm the latest standard FBFL file is deployed.
Classroom v2 controls missing	Verify Classroom v2 database upgrade and current HTML.
Online League markets/communications missing	Verify current Online League/shared-market/comms SQL and membership.
GIS layer empty	Enable the layer and confirm current roster/recruit data exists for it.
Stats carried into a new season	Stop advancing; verify season rollover/reset before overwriting the good save.
