

LIQUID SPORTS

ONLINE LEAGUE DYNASTY

FBBL Player & Commissioner Instructions

ONE LEAGUE. SHARED MARKETS. ONE OFFICIAL RESULT.

Create a shared FBBL universe, claim programs, compete on one calendar, recruit from one league-wide prospect pool, use one offseason Transfer Station, communicate inside the league, and advance through a multi-season dynasty together.

QUICK START

Normal sign-in -> Game -> Online Leagues -> Create/Join -> Claim program -> Review shared markets -> Submit weekly plan -> Resolve official result -> Communicate as needed -> Commissioner advances after every game is complete.

1. What Online League Dynasty Is

- A shared competition layer that runs alongside each coach's personal Liquid Basketball Dynasty.
- All 26 standard FBBL programs remain available. Human coaches claim programs; unclaimed teams stay CPU controlled.
- The league keeps one common season year, week/phase, schedule, standings, shared recruiting class, shared Transfer Station, postseason, and championship history.
- The shared server result - not a separate personal simulation - is authoritative for Online League standings.
- Shared league signings build league-authoritative talent/rating context but do not overwrite the detailed roster in your separate solo Dynasty save.

BEST PRACTICE

Use the same school in your personal Dynasty that you claim in the Online League when practical. Personal Dynasty remains the detailed program-management experience; the Online League owns the shared competition and shared markets.

2. Account and Access Rules

- A normal permanent signed-in Liquid Basketball account is required.
- Offline mode cannot create or join an Online League.
- Anonymous Classroom Mode sessions cannot create/join an Online League.
- League membership is stored in Supabase and follows the signed-in account across devices.
- A program can be controlled by only one human coach in the same league.

3. Create a League - Commissioner

Setting	What it controls
League Name / Abbreviation	League display name and code context.
Commissioner / Coach Name	Display name shown to league members.
Max Human Coaches	4, 8, 12, 16, or 26; CPU fills unclaimed programs.
Difficulty	Easy, Medium, Hard, or Impossible.
Team Budgets / Sponsorships / Academics	League preferences. Detailed personal management remains personal unless the league screen identifies a system as shared.

LEAGUE CODE Share the generated league code only with the coaches you want in the league.

4. Join, Claim, and Weekly League Flow

- 1 Open Game -> Online Leagues.
- 2 Enter the league code and your coach name, then join.
- 3 Claim one available FBBL program. Completed results remain part of league history even if a coach later changes programs.
- 4 Review the league week/phase, matchup, standings, coach list, shared recruiting, and Transfer Station status.
- 5 Manage your personal Dynasty systems separately, then submit the required Online League game plan.
- 6 Resolve the official shared matchup when the required human plans are present.
- 7 Commissioner advances only after every current-round game is complete.

Matchup	Plan requirement	Who may resolve
Human vs Human	Both human coaches submit a plan.	Either participant or commissioner.
Human vs CPU	Human coach submits a plan.	Human participant or commissioner.
CPU vs CPU	No human plan.	Commissioner.

A completed shared game is locked. Resolving again should return the stored result rather than create a different score. Online League games do not end in a tie.

5. Shared League Recruiting

The current standard FBBL Online League uses one recruiting market for every human and CPU program.

- Programs build interest in the same prospects. The first eligible program to reach 100% wins the commitment.
- Human coaches receive 3 recruiting pitches during regular/postseason league periods and 12 pitches during the offseason period.
- CPU programs recruit from the same market as the commissioner advances the league.
- A committed shared recruit belongs to one program in that Online League.
- The commissioner should not advance prematurely while coaches still need their scheduled market opportunities.

6. Shared Transfer Station

- The shared Transfer Station is locked until OFFSEASON.
- When open, every human and CPU program recruits from the same transfer pool.
- Each transfer can sign only once; the first program to reach 100% wins the player.
- The offseason shared contact limit is 12 for a human coach.
- A league player placed into the Transfer Station immediately leaves that program's shared Online League talent group and can sign elsewhere.
- Shared signees preserve league source/history and can affect Online League talent/rating context without replacing the detailed solo roster.

7. League Board and Direct Messages

The current Online League communications layer is available only to normal signed-in league members. Messages are text-only.

Feature	How it works
League Board	Categories: General Discussion, Scheduling, Game Results / Trash Talk, Commissioner Announcements.
Threads / replies	Members can post/reply; commissioners can pin/lock where allowed.
Private DMs	Coach-to-coach messages within the same league; unread-message badge.
Realtime	Board posts/replies/messages refresh through Supabase Realtime when available.
Block / Unblock	Blocking prevents new DMs in both directions while active.
Report content	Members can report a thread, reply, or specific DM message.
Commissioner tools	Reports inbox plus 24-hour Board mute or DM suspension; restrictions can be cleared.

DM PRIVACY

Commissioners do not receive blanket access to private DMs. Reporting a DM copies only the specifically reported message into the report record for review.

8. Regular Season, Postseason, and Multi-Season Play

- The shared regular season is 18 weeks and schedules all 26 FBBL programs, including CPU-controlled teams.
- Standings use completed shared regular-season games.
- After Week 18 is completed and advanced, all 26 programs enter the five-round single-elimination FBBL Tournament. Seeds 1-6 receive first-round byes.
- The commissioner moves the league through regular season, postseason, offseason, and the next season only in the proper order.
- Shared recruiting/Transfer Station activity and league history continue across seasons; personal Dynasty save slots remain separate.

9. Commissioner Responsibilities

- Create the league, share the code, and verify each human coach claims the intended program.
- Keep league settings stable after competition begins.
- Allow weekly plans and market actions before advancing.
- Resolve ready games and CPU games as needed.
- Initialize/repair shared markets only when necessary; avoid resetting a healthy active market.
- Advance only when every current game is complete.
- Moderate League Board/reports without treating private DMs as commissioner-readable conversations.

10. Troubleshooting

Message / problem	What it usually means
Sign-in required	Use a normal permanent account, not anonymous Classroom Mode.
Program already claimed	Another human coach controls it.
Cannot resolve game	A required human game plan may still be missing.
Commissioner cannot advance	At least one game in the current round is incomplete.
Recruit pitch unavailable	You reached the period limit or the prospect already committed.
Transfer Station locked	The league is not in OFFSEASON yet.
League Board / Messages missing	Current communications SQL/HTML may not be deployed, or you are not a permanent member of that league.
Board/DM restricted	A temporary moderation restriction or block is active.
