Baseball

LIQUID SPORTS

Complete Game Instructions

Detailed player manual for Liquid Basketball, Liquid Football and Liquid Baseball

One Management Universe. Three Sports.

This guide covers Liquid Basketball, Liquid Football and Liquid Baseball. The interface and weekly management philosophy are intentionally consistent, while each sport keeps its own rules, roster structure, statistics, tactics and game simulation.

Contents

Section	What it covers
1. Start Here	Modes, team selection, saves and first setup
2. The Weekly Loop	Exact order of operations for every game week
3. Dashboard and Navigation	Weekly, Numbers, Program and Game menus
4. Trivia and Classroom Rewards	Interactions, question counts and banking
5. Training and Academics	30-hour plans, eligibility, recovery and development
6. Roster and Player Management	Depth charts, rotation, lineup, training and player monitor
7. Recruiting and Transfers	Roster needs, class caps, contacts and offseason movement
8. Sponsorships and Budget	Optional program-business systems
9. Coach Career and Community Service	Decisions, trust variables, service windows and reminders
10. Playing Games	Football, Basketball and Baseball live simulation
11. Stats, History and Awards	Season leaders, records, box scores and historical scopes
12. Online League	Shared-recruiting dynasty concepts and commissioner workflow
13. Saving, Troubleshooting and Deployment	Local/cloud saves, browser behavior and common fixes

Section	What it covers
14. Sport Reference	Football, Basketball and Baseball quick-reference tables

1. Start Here

Liquid Sports is designed around the same basic management rhythm in every sport: choose a fictional program, manage the week, make resource decisions, coach the game, review the results and advance. Football, Basketball and Baseball use the same broad navigation vocabulary so players do not have to relearn the entire interface when switching sports.

Choose a play mode

Mode	Best for	How it works
Solo Dynasty	Individual play	Use the built-in trivia/question system, manage the program and progress through seasons.
Classroom Mode	Teacher-led play	Students join with class code/key. Teacher-created curriculum replaces or supplements the built-in question bank according to the deployed game.
Cloud Saves / Resume	Returning players	Sign in only when you want cloud-based save access. Local play does not need to wait for cloud services.
Online League	Group dynasty	Use the game's online/commissioner features when enabled by the deployment. Shared recruiting/transfer rules help multiple coaches play in one universe.

First-time setup

- 1 Open the game and select the program you want to manage.
- 2 Review Settings before your first week. Sponsorships, Team Budget and difficulty can be adjusted where the game exposes those options.
- 3 Open Roster/Depth Chart/Rotation/Lineup and confirm the game has a usable starting group.
- 4 Open Team Training and Academics. Save a legal weekly plan before advancing.
- 5 Open Recruiting and read the Position Needs panel. The game now evaluates roster classes, seniors leaving, projected returning depth and committed recruits.
- 6 Review the current schedule and scouting information before spending interactions.
- 7 Answer trivia or classroom questions to earn the management currency used for recruiting, player training and other weekly actions.

Do not rush the Advance button

The Football and Basketball builds now warn you before advancing when a player/coach decision is unresolved or when a community-service window is open. Use the reminder to jump directly to the appropriate panel.

2. The Weekly Loop

A good Liquid Sports week follows a deliberate order. You can move around the interface in any order, but this sequence prevents missed requirements and wasted interactions.

Step	Action	Why it matters
1	Schedule / Scouting	Know the opponent and whether the week is regular season, postseason or offseason.
2	Trivia / Classroom Questions	Earn the week's management interactions before spending them.
3	Team Training	Allocate the 30-hour weekly plan and save it.
4	Academics	Check GPA and eligibility. Ineligible players stay on the roster but cannot participate until eligible.
5	Roster / Depth / Rotation / Lineup	Fix injuries, eligibility issues, role problems and depth before the game.
6	Recruiting / Transfers	Spend contacts on positions your future roster actually needs.
7	Coach Career / Community Service	Resolve player/coach issues and complete service windows when active.
8	Play / Simulate	Coach the live decision moments or use the available simulation option.
9	Review Box Score / Stats	Check individual production, opponent production, records and trends.
10	Advance	Move to the next week only after the current week is complete.

Interaction banking

Interactions are earned from trivia/classroom performance and are then spent on management actions. Unused earned interactions can carry forward according to the game's current banking rules. The offseason Transfer Week intentionally allows more freedom than a normal weekly cap so accumulated resources can be used on retention and transfer decisions.

3. Dashboard and Navigation

The shared parity structure groups major panels into four navigation families.

Menu	Typical panels	Use it for
Weekly	Schedule, Trivia/Classroom, Team Training, Academics, Roster, Recruiting, sport lineup/depth, Play, Advance	Everything needed to complete the current week.
Numbers	Rankings, Standings, Season Stats, History/Records	Performance evaluation and record tracking.
Program	Transfer Station, Committed Players, Sponsorships, Budget, Coach Career, Community Service	Long-term program management.
Game	Universe, Awards, Online League, Settings, Instructions, Video, Save	League-wide context, help and administration.

Navigation is intentionally compact on tablets and phones. If a menu group is collapsed, open the category first, then choose the panel. Sticky navigation stays near the top while you work through long tables.

4. Trivia and Classroom Rewards

Questions are the bridge between learning and program management. In Solo Dynasty, the game uses its built-in question/trivia system. In Classroom Mode, the teacher can replace that content with curriculum questions.

Sport	Teacher questions per game week	Full-credit weekly pool	Typical solo rule
Basketball	3-10	6 Trivia Points + 6 interactions	Built-in weekly question flow; earned interactions can be banked.
Football	3-10	30 Trivia Points + 30 interactions	Each correct standard question is worth +10 in the football classroom/interaction model.
Baseball	3-10	21 Trivia Points + 21 interactions	Standard dynasty uses up to 3 questions per game week at +7 each; classroom 3-10 divides the 21-point pool across the assigned count.

Teacher-graded responses

- Multiple Choice can grade automatically against the selected correct answer.
- Short Answer can use normalized matching against the correct answer and acceptable alternatives, or be sent for teacher review.
- Essay responses are normally teacher reviewed. A teacher-assigned percentage scales the question's weekly value.
- Completion grading is useful for journals/reflections when submitting a nonblank response should earn full credit.

5. Training and Academics

Team Training is a weekly resource-allocation decision, not a cosmetic setting. The shared training model uses a 30-hour weekly plan. Football and Basketball expose categories such as Offense, Defense, Team Building, Rest, Mindfulness, Weights, Study Hall and Physical Therapy. The scouting report recommends a distribution, but the coach can choose another plan.

Training rules and practical strategy

- The saved weekly plan must total the required number of hours before the game can advance.
- Study Hall affects academic outcomes and helps stabilize eligibility.
- Rest and Physical Therapy protect recovery and can matter when the roster is stressed.
- Weights and sport-specific work support development but should not crowd out recovery or academics.
- Scouting-fit bonuses reward training plans that address the current opponent rather than repeating the same template every week.

Academics

- Every player carries academic information such as GPA and current eligibility.
- The minimum eligibility threshold in the current Football/Basketball builds is 2.00 GPA.
- An ineligible player stays in the program but is excluded from game participation until eligibility returns.
- Depth charts and lineups should be checked after academic status updates, because the best-rated player may not be available.
- Academic performance also influences the Coach Career evaluation.

6. Roster and Player Management

The three sports use different roster sizes and lineup mechanics, but the management principle is the same: build a legal competitive unit now while developing enough future depth to survive graduation and transfers.

Sport	Approx. roster	Primary lineup management
Basketball	15 players	PG, SG, SF, PF, C depth chart / rotation and basketball-specific role management.
Football	Large multi-unit roster (roughly 60-player program structure)	Offense, defense and special-teams depth across football positions.
Baseball	About 34 players	Lineup, defensive positions, DH logic, 5-man rotation and bullpen roles.

Player interactions and coach decisions

Player attitude, trust, development, academics, sponsorships and coach decisions can interact with retention. When a player/coach issue appears, resolve it in Coach Career before advancing if you want to control the consequence. Football and Basketball now show an explicit reminder popup when such a decision remains unresolved.

7. Recruiting and Transfers

Recruiting now uses the current roster's class structure instead of treating every position equally. The Position Needs panel evaluates how many players are currently at each position, how many are seniors, how many return next season, what has already been committed, and the target depth for that position.

Sport	Annual first-year recruiting cap	Why the cap fits the roster flow
Basketball	5	A five-player class is large enough to replace a graduating group without rebuilding the entire 15-player roster every season.
Football	20	A 20-player class fits the large football roster and multi-position depth needs while preventing unlimited recruiting.
Baseball	10	Ten first-year additions fit the 34-player roster and the turnover needs across pitchers, catchers and position players.

Reading the Position Needs panel

- **Current** shows players presently on the roster at that position.
- **Seniors** shows players expected to leave after the season.
- **Projected Returners** removes seniors from next year's depth projection.
- **Committed** adds recruits already secured for the next roster.
- **Target Depth** is the desired number for a healthy roster structure.
- **Priority** identifies positions where projected depth will be below target.

Transfer Station

Transfers are an offseason mechanism and remain separate from the annual first-year recruiting cap. Use the Transfer Station to patch an immediate hole, replace unexpected losses or add experience. Because transfers can change roster balance quickly, revisit the Position Needs panel after every major addition or departure.

8. Sponsorships and Team Budget

Sponsorships and Budget are optional program-management layers. If disabled in Settings, the game should continue without requiring those systems. When enabled, they create tradeoffs between exposure, player opportunities, travel, meals, resources and long-term coach evaluation.

- Sponsorship offers use fictional companies and fictional shoe/apparel brands.
- Program exposure and player quality can influence offer quality.
- Budget decisions can include travel and meal costs and may affect administration confidence.
- A strong budget position can support Coach Career evaluations; poor financial management can create pressure or penalties.
- Do not spend resources only for short-term gain. Recruiting, academics, travel and development compete for attention across a season.

9. Coach Career and Community Service

Coach Career tracks more than wins and losses. The current Football/Basketball structure includes reputation, job security, administration trust, locker-room trust, media goodwill, energy, stress, work-life balance, recruiting momentum and retention momentum.

Coach decisions

- Player incidents and program stories can create a pending decision with multiple responses.
- Each response can affect trust, stress, budget, recruiting, retention, reputation or player attitude.
- Unresolved decisions stay visible in Coach Career. Football and Basketball now remind you before the week advances.
- Use the tooltip/effect summary when available to understand which coach variables a choice can move.

Community service

Football and Basketball schedule required community-service windows during Regular Season Weeks 3, 6, 9 and 12. Activities can improve morale, locker-room trust, media goodwill, administration trust, reputation and Program Building. Skipping an open window applies the game's existing negative consequences.

Examples	Typical tradeoff
Food Drive / Community Outreach	Positive public impact with a small time/energy cost.
Veterans Housing Project	Large program-building and morale benefits with a heavier energy cost.
Nursing Home / Children's Hospital Visit	Strong morale, community and media benefits.

10. Playing Games

Liquid Sports does not require the user to call every snap, possession or pitch. Instead, the simulation runs the game and stops at high-leverage coaching moments. Your choices modify risk, field/shot quality, possession value, matchups or tactical outcomes without forcing every game to become artificially close.

Basketball live simulation

- The current men's-college-style rules engine uses two 20-minute halves, 5-minute overtime and a 30-second shot clock.
- Decision frequency scales with competitiveness: true blowouts still receive several coaching choices, while close games can produce 8-10 decisions.
- The live card can show game time, score, opponent offensive set/action, opponent defense and current player matchup advantages/concerns.
- Offensive choices can use 5-Out, 4-1, 3-2, 2-1-2 High, 1-4 High, high-low, ball screens, dribble handoffs, cuts and baseline out-of-bounds concepts.
- Defensive choices can use man principles, switching/sticking, drop/under, hedge, blitz, ice, pressure and multiple zone structures.
- Foul trouble, team fouls, timeout/challenge status and late-game rules can create additional decisions.

Football live simulation

- The simulator develops the score drive by drive from field position, turnovers, punts, scoring drives, conversions and clock strategy.
- Situational play-call cards show the score, quarter/time, down and distance, field position and possession.
- Opponent scouting shows the base offense/defense and the current call. Cleaned prompts separate GAME SITUATION, OPPONENT OFFENSE, OPPONENT DEFENSE and COACHING DECISION.
- Offensive examples include Pistol Inside Zone Read, Shotgun 3x1 Mesh, 12 Personnel Play-Action Deep Cross and 11 Personnel RPO.
- Defensive examples include 4-2-5 Cover 3 Match, 3-3-5 Tite Quarters, Cover 1 pressure, Cover 6 and run-fit choices such as Spill and Scrape or Lever/Force.
- Close games can produce 8-10 coaching decisions; games with a 20+ point margin still retain 3-5 meaningful decisions.

Baseball live simulation

- Baseball is organized around 9 innings, 3 outs per half-inning, 4 balls for a walk and 3 strikes for a strikeout.
- The current pitching-management build uses a 5-man rotation plus bullpen roles and tracks fatigue/rest.
- Coaching decisions include bunts, hit-and-run, take/draw-walk strategy, sacrifice/situational hitting, intentional walk decisions, pitching changes and defensive alignment.
- Pitcher usage, handedness/platoon considerations, warm-up, inherited runners and bullpen roles influence pitching-management decisions in the upgraded build.

11. Stats, History and Awards

After each game, use the box score before advancing. Box scores are not only visual recaps; they feed season totals, leaders, records and historical awards.

- Basketball tracks standard offensive and defensive production and opponent box-score statistics.
- Football tracks passing, rushing, receiving and defensive categories. Opponent box-score leaders now use fictional player names rather than school/position placeholders.
- Baseball tracks batting, pitching and fielding-oriented production appropriate to the current simulation.
- Season Stats can be viewed at league/Region scope where supported.
- History preserves season summaries, awards and all-time statistical records at league, Region and school scope where implemented.

Historical records

The record book is designed to keep the dynasty meaningful over many seasons. Records should be checked before a new season reset, especially when a senior or graduating player has just completed a major statistical year.

12. Online League

Online League is the multi-coach extension of the dynasty model. Exact controls depend on what the deployed game exposes, but the intended workflow is consistent: commissioner creates/controls the shared environment, coaches join, weekly management occurs under the same rules, and shared recruiting/transfer data prevents every coach from operating in an isolated universe.

- Use one commissioner/league owner to define the season cadence and participation expectations.
- Require all coaches to complete their week before the league advances when the deployment supports coordinated advancement.
- Use shared recruiting and Transfer Station rules to prevent duplicate signings.
- Agree in advance on difficulty, optional budget/sponsorship systems and any classroom requirements.
- Keep backups or cloud saves before major league transitions.

13. Saving, Troubleshooting and Deployment

Local play is intentionally independent of Supabase/cloud startup. Cloud services are optional for cloud saves, classroom and online features.

Problem	What to check
The game opens but cloud login does not	Use local play first; verify internet connection and the configured Supabase project only for cloud/classroom features.
The page is visible but frozen	Use the current builds. The previous recursive navigation MutationObserver freeze was removed.
A player is unavailable	Check academics/eligibility, depth chart and roster status.
Cannot advance	Save a legal weekly training plan and resolve any hard requirements. New reminder popups identify player/community items before advancing.
PDF/video Help buttons fail after deployment	Upload index.html and every referenced PDF/MP4 to the same repository root.
Render deploys old content	Verify the live deployment commit matches the newest GitHub commit and hard-refresh the browser.

Static deployment

- 1 Keep index.html at the repository root.
- 2 Upload every PDF and MP4 referenced by the game beside index.html.
- 3 For a Render Static Site, Root Directory can remain blank, Build Command can remain blank and Publish Directory can be '.'.
- 4 Commit to the branch connected to Render and confirm the newest commit becomes Live.
- 5 After major changes, test locally and in a private/incognito browser window.

14. Sport Quick Reference

Feature	Basketball	Football	Baseball
Primary roster scale	15	Large multi-unit roster	~34
First-year recruit cap	5	20	10
Classroom full-credit weekly pool	6	30	21
Required community windows	Weeks 3, 6, 9, 12	Weeks 3, 6, 9, 12	Use current Baseball program/community implementation if enabled
Core lineup tool	5-position rotation/depth	Offense/defense/special-teams depth	Lineup + 5-man rotation + bullpen
Live tactical focus	Sets, coverage, matchup, fouls, clock	Down/distance, field position, schemes, clock	Pitching changes, situational offense, bullpen, defense

Best habit in all three games

Before advancing: check the Schedule, save Training, confirm Academics/eligibility, review the lineup/depth chart, spend recruiting contacts, resolve Coach Career decisions, complete Community Service when required, then review the game/box score.
